

BOOTCAMP WEB

< DAY 04-05 - MINI-PROJECT />

BOOTCAMP WEB

For the next two days, you'll train your HTML/CSS skills and upgrade your resume to the next level. Design and create a page (or a set of pages) that you could host to have an online resume. Feel free to add animations and stuff, it can both improve your resume for the viewer and show your personality.

You should organize cleverly your information, files and directories!
The usage of frameworks and libraries is authorized and welcome.
Remember that the viewers could be some potential recruiters.

You must respect at least the following constraints:

- ✓ your code must be clean and well structured;
- ✓ your code must present a clear separation between HTML and CSS;
- ✓ your HTML syntax must be valid ([W3C validator](#) returns no errors);
- ✓ you must use effects, such as transitions or animations;
- ✓ your resume must contain interactive elements;
- ✓ your resume must have a contact form;
- ✓ your resume must have a responsive design;
- ✓ your page design should be appealing;

Here are some creative and original examples:

- ✓ [inspired by amazon](#);
- ✓ [interactive video game](#);
- ✓ [interactive 3D](#).

No automated tests for this mini-project.
You'll have a defense next week where a human will evaluate you.
